Migrating Your Website to a Web Hosting Provider

March 25, 2013 | [Web Hosting](#)

g+1 Like **0**

As a business owner, you need a website to properly promote your business. More important than having a website, however, is having a reliable infrastructure on which to host your site. savvisdirect offers a reliable [website hosting platform](#) that can handle your website whether it's a standard working day or an extremely busy traffic time.

Getting Your Info

Before your cloud provider can start migrating your website to a cloud computing platform, your Cloud Specialist needs to know how your website is setup. Have the below information ready to provide to your cloud provider before you contact him:

- How was your current website built i.e. using a content management system, site building tool, publishing software, etc.?
- How do you update your website? How will you make changes to your site after the migration?

January 4, 2013

- Do you have the login credentials for your current hosting provider and domain registrar?
- Does your website come with email accounts that you would like to move over as well?

Why these questions? Knowing how your website is built helps determine how your website is transferred to cloud hosting.

Migrating Your Data

Once your Cloud Specialist understands how your website is set up, it's time to start migrating your content. This stage involves gathering up all of your files and databases on your current website hosting platform. These are then moved to a cloud provider like savvisdirect. Any email accounts and email contacts associated with your website will also be migrated at this time.

Follow-up and Support

Once the migration process is done, your Cloud Specialist will verify that all the information was migrating properly and will fix any migration issues. If you need additional support or training, savvisdirect offers comprehensive [Premium Support Services](#) to assist you with this process.
