Private Cloud Helps IT Admins Do More with Less

January 4, 2013 | [Private Cloud](#)

IT departments are stretched thin. IT admins are constantly doing more with less. Budgets get cut. You're left spending all of your time dealing with maintaining and reconfiguring servers as opposed to actually getting what you need to get done, done. That means optimizing your applications and ensuring they are highly available get placed on the back burner, next to your unhappy customers.

While many IT admins are reluctant to venture into the cloud (mainly because they think it means their job), a private cloud platform enables you with the flexibility to actually get those important tasks knocked off your list so you can operate a top-notch IT organization.

As an IT person, you may be wondering how the [private cloud platform](#) benefits you. If we take the [savvisdirect](#) private cloud product AppGridSM as an example, you'll see that you and your IT staff can actually be more efficient when using a prepackaged cloud infrastructure, especially when you need to deploy applications.

AppGrid helps you effectively and easily deploy n-tier applications, especially when your code handles concurrency. You select what you

need from a catalog of standard virtual infrastructure appliances like firewalls, load balancers and databases. This catalog of appliances was created by savvisdirect IT industry experts especially for quickly deploying your applications.

Once your virtual infrastructure is deployed, you simply copy your scripts code, HTML files and databases from your development environment to the logical volumes. From there, you can immediately launch your application. AppGrid is also ideally suited to developing new applications from scratch. Start with a small dev environment, and when ready, scale up to production with a simple resource allocation change.

With a private cloud platform, you simply pay for the cloud hardware and compute capacity that you need, nothing more. We handle the hardware which allows you to eliminate unnecessary expenditures free up your capital that would otherwise be spent on extra hardware and software. No more maintenance costs to deal with, and you can easily customize your private cloud deployments based on staff requirements.

Plus, you'll ultimately have the peace of mind that comes from knowing that all of your data is securely protected behind your firewall, a firewall that is completely under your control. You control access based on policy that you set so there's no fear of someone gaining access they're not supposed to have.

Want to see if AppGrid will work for your IT department? Try out [AppGrid](#), and we'll prove it to you. Contact us today at 1-855-459-5121 to learn more about the benefits of savvisdirect's private cloud platform.
